

Deepak Rajesh

Computer Science Engineering Student | Python Developer | AI Enthusiast

Chennai, Tamil Nadu, India | deepak3357rajesh@gmail.com | [GitHub](#) | [LinkedIn](#) | [Portfolio](#)

CAREER OBJECTIVE

Motivated Computer Science Engineering student with a strong foundation in software development, Artificial Intelligence, and full-stack web technologies. Passionate about building innovative software solutions through hands-on projects and continuous learning. Seeking a Software Development or AI internship to apply technical skills, contribute to real-world projects, and grow as a software engineer.

EDUCATION

Bachelor of Engineering (B.E.) - Computer Science and Engineering | Saveetha School of Engineering, SIMATS, Chennai | CGPA: 9.0 / 10.0

TECHNICAL SKILLS

Languages: Python, Java, C++, C, JavaScript, TypeScript
Frontend: React, HTML5, CSS3, Tailwind CSS, Vite
Backend / DB: Node.js, Express.js, MySQL, Supabase
AI Tools: OpenAI, Google Gemini, Antigravity AI, Lovable AI
Cloud / Deploy: Netlify, Vercel, Replit
Dev Tools: Git, GitHub, VS Code, Qt 6, Power BI

ACADEMIC PROJECTS

Smart Attendance Management System (C++, OpenCV, Qt 6, LBPH)

- Developed an AI-powered desktop app for automated attendance using real-time face recognition; implemented liveness detection and a Qt-based interface with attendance analytics.

Secure File Management System (Java, MySQL, AES-256, SHA-256)

- Built a secure file management application with encrypted storage, role-based access control, authentication, and file integrity verification.

Wi-Fi 6 WLAN Architecture (Cisco Packet Tracer, Wi-Fi 6, OFDMA, MU-MIMO)

- Designed and simulated a high-density enterprise wireless network; evaluated performance and optimized connectivity using modern wireless standards.

Weather Prediction System (Python, Machine Learning, Pandas, NumPy)

- Developed an ML model to predict weather conditions from historical meteorological data using data preprocessing and visualization techniques.

Bike Demand Prediction (Python, Machine Learning, Power BI)

- Built a predictive analytics model for forecasting bike-sharing demand, visualized through interactive Power BI dashboards.

Custom CPU Simulator (Python, Qt 6)

- Designed an interactive simulator to visualize custom CPU instruction execution, demonstrating computer architecture concepts graphically.

Responsive CPU Task Scheduler (Python, Machine Learning)

- Developed a CPU scheduling simulator supporting FCFS, Round Robin, and Priority Scheduling, comparing performance using graphical analytics.

LEADERSHIP & VOLUNTEERING

Lead Tech Organizer – BYTEFORGE 2026

- Led the technical team developing the official hackathon website and registration portal; managed authentication, participant registration, and technical infrastructure.

Student Coordinator – NEURALZENATHON 2026

- Assisted in planning and coordinating the hackathon, supporting participant management, event logistics, and successful execution.

ACHIEVEMENTS

- Maintained a 9.0 CGPA in Computer Science Engineering at SIMATS Engineering.
- Completed 7+ software development projects across AI, Networking, Security, and Full-Stack Web Development.
- Published multiple software projects on GitHub with proper documentation and version control.

AREAS OF INTEREST

Software Development | Artificial Intelligence | Full-Stack Web Development | Machine Learning
